THE ANSWER *IS NOT* THE END.

Structure, student agency and evidence of independent judgement

Amina Tuzelova · Alikhan Khamidulla · Temirlan Zholtayev · Alua Nurlybekova · Zhanerke Pernesh

01 Introduction: Learning from HE Pedagogy Course

Can structure support independent judgement?

Our HE Pedagogy learning connects readings, classroom questions, five members' reflective records and local survey perceptions. A finished answer reveals less than its reasoning.

The Week 3 essays question whether institutional reform changes learning. The submitted group essay narrows this to assessment and independent judgement. This is textual comparison, not measured individual development.

Shared standards should assess explanation, questioning and justified revision. [G; R1–R5]

02 Learning from Reading and Engagement with Literature

Three complementary lenses

Didaktik: teacher–student–subject relations require situated judgement. Responsiveness risks inconsistency. [1]

Constructive alignment: outcomes, activities and assessment should cohere. Narrow targets may exclude unexpected enquiry. [2]

Educational purposes: qualification, socialization and subjectification challenge education defined only by scores. [3]

Assess the quality of reasons; allow different defensible conclusions.

03 Learning from Group/Individual Reflective Notes

Five voices complicate one answer

Amina Tuzelova: from questioning education as investment to ethical AI enquiry. Guidance should support self-active learners, rather than dependence. Mollenhauer/Rancière inform the tension. [R1; scan pp. 1–3, 5–8]

Alikhan Khamidulla: values question-raising, while the handwritten note broadens teacher responsibility beyond expertise to social conditions and intellectual challenge. [R2; scan p. 1]

Temirlan Zholtayev: revises a strict-vs-friendly teacher comparison: more mathematics practice confounds recall. Plans one seminar question. [R3]

Alua Nurlybekova: distinguishes diagnostic, formative and summative assessment; asks how projects and explanation can reveal independence under AI. [R4]

Zhanerke Pernesh: values examples but questions dependence; authority need not imply superiority. Attentive listening matters for hesitant learners. [R5]

Situated self-reports, not a common starting belief or a measured time series. Amina's scan filename says week_6; p. 3 says Week 5, 07.10.2026. No handwritten quotations.

04 Learning from Peer Feedback and Reflection

Information becomes useful through action

Formative feedback should help students evaluate and revise their work. Generic or late comments may be unusable. [4]

Illustrative revision, not a peer quotation: "Discussion improves learning" becomes "Discussion can support enquiry when participation is accessible."

Alikhan's perceived benefit and Temirlan's hesitation qualify the claim. Private preparation and written contributions are proposed supports, not tested effects.

Notice a gap → interpret → choose a change → justify it.

05 Learning from the Poster Development and Presentation

Make the source trail part of the form

Actual artifact decisions: preserve seven explicit sections; separate five contributors from 22 survey respondents; label disagreement accurately; keep files and caveats beside personal claims.

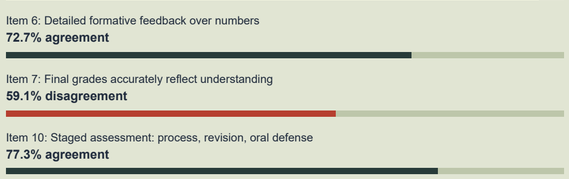

Prospective presentation: use one interaction per speaker, direct chapter navigation and this static poster. Assign source ownership; rehearse questions as well as transitions.

A communication lesson: visible evidence allows an audience to challenge an interpretation. These design decisions do not substitute for personal presentation testimony.

06 Learning through Assessment

Assess a product, process and explanation

A polished essay can show synthesis; a reasoned revision reveals response to evidence; an oral explanation can probe decisions. None alone guarantees validity. Shared criteria and equivalent accessible formats address fairness. [G; 5]

N=22, one Applied AI master's cohort, 5-point Likert self-report. Separate items, not one total. No raw responses, Item 8 or causal estimates. [G]

07 Conclusion: Critical Reflection: What Have We/I Learned About HE Pedagogy?

From visible results to visible reasoning

We interpret effective teaching as purposeful guidance with room for independent judgement. Clear outcomes remain useful; they cannot settle every educational purpose.

Proposed sequence: outcome → concise example → private thinking → dialogue → draft feedback → reasoned revision → accessible explanation, with AI assistance disclosed.

Critical limits: workload can delay feedback; oral tasks can intensify anxiety; discretion can undermine fairness; rubrics can reward conformity. Pilot and evaluate the design.

THE ANSWER IS NOT THE END. Explain, question, revise and defend it.

20% Understanding and Critical Reflection on HE Pedagogy	20% Integration of Literature, Reflective Notes and Learning Experiences	20% Critical Evaluation and Application to HE Practice	20% Academic Poster Design and Communication	20% Q&A, Discussion and Response to Peer Feedback
